

CONVERSION AUDIT REPORT

Lorescape

https://lorescape.app/en

PAGE TYPE	Tool
SCORE	Room to improve
PREPARED	28 June 2026
PREPARED BY	Ferguson — The AI Conversion Auditor

Ferguson is an AI auditor that reads this page the way a careful visitor would, scores it against a set of conversion and UX principles, and compares the result to a growing data set of similar audits. Findings here are evidence-based, not certain. Anything touching pricing, legal or compliance language, or brand voice is worth a human review before you act on it.

[homepage](#)[Report incorrect category](#)

Goal: download the app (App Store or Google Play)

EXECUTIVE SUMMARY

Lorescape's homepage is doing a great deal right: the hero is clear, the brand voice is distinctive and consistent, and the 'Many Angles' feature demo is one of the more effective in-page product demonstrations I've seen on a consumer app page. The literary framing — 'the city is a book, start reading' — is genuinely evocative and the line 'Stop staring down at your screen. Look up' is the kind of copy a visitor actually remembers.

The page is losing visitors at two predictable moments. First, the AI accuracy concern is never addressed — for a product that generates historical content using AI, the word 'AI' in the hero raises a scepticism flag that nothing on the page resolves. History-curious travellers are exactly the audience most likely to worry about hallucinated facts, and they'll leave without downloading if that doubt goes unanswered. Second, there is no social proof of quality — no App Store rating, no user quote, no press mention — which means the '50,000 explorers' count is doing all the trust work alone, and it isn't enough for a visitor who has never heard of Lorescape.

The single most important fix is adding a trust line that addresses AI accuracy — even one sentence near the hero about how stories are sourced or verified would meaningfully reduce the bounce rate among the sceptical-but-interested visitor who is currently the most likely to leave unconverted.

Ferguson's note: I scored Single Primary CTA as a partial rather than a fail — the App Store and Google Play buttons represent the same action on different platforms, which is entirely appropriate, but the nav-level 'Download App' button creates a third instance of the same CTA without adding hierarchy. It's not a competing action, but it does dilute the focal point. Consolidating the nav CTA or removing it in favour of the hero buttons would push this to a clean pass. I also scored Specific Claims as partial rather than a fail — '50,000 explorers' is a genuine quantified claim, but it measures adoption rather than outcome or content quality, and the core value proposition remains qualitative throughout. One specific claim about content depth, coverage, or accuracy would push this over.

BRAND VOICE

Literary travel companion — places framed as books, stories, and chapters; the world as a living exhibit worth reading rather than photographing

evocative, editorial, quietly confident

✓ Translates well

Key vocabulary:

storyteller

lore

chapters

arc

exhibit

The literary metaphor is immediately grounded by 'Your pocket AI storyteller. Wherever you go, it tells you the origins, legends, and history of the place around you' — a cold visitor understands the product within the first viewport.

WHAT'S WORKING

- ✓ **Hero headline and subheadline clarity** — 'Experience history, not just the view' paired with 'Your pocket AI storyteller. Wherever you go, it tells you the origins, legends, and history of the place around you' gives a cold visitor an immediate, accurate mental model of the product — the what, who, and why land within seconds.
- ✓ **'Many Angles, One Place' feature concept** — Showing three distinct story angles for St. Peter's Basilica (political, sacred, architectural) is a concrete, scannable demonstration of the product's depth — it does the work of a demo without requiring a video, and it differentiates Lorescape from a simple Wikipedia wrapper.
- ✓ **'Stop staring down at your screen. Look up — the world itself is the exhibit'** — This line is genuinely memorable and emotionally resonant for the target audience — it names the problem (phone-distracted tourism) and positions the app as the antidote in a single sentence a visitor would repeat to a friend.
- ✓ **Auto Journal feature framing** — The journey journal concept — auto-written entries, filed by trip, displayed on a timeline — adds a retention and emotional value layer beyond the core use case, giving travellers a reason to keep the app installed after each trip rather than deleting it.

Mobile

PAGE LOAD Fast 1.1s to load

INFERRED TARGET AUDIENCE

Market type

B2C

Who they are

Curious travellers — likely 25–55, culturally engaged, who feel underwhelmed by standard guidebooks and want richer context when visiting landmarks

Primary fear

Downloading yet another travel app that turns out to be shallow, gimmicky, or requires constant connectivity

Buying context

Individual traveller deciding whether to download a free app — low-friction, self-directed decision made in seconds

Arriving from

Aspirationally curious — probably discovered via social media or word of mouth, arriving with mild interest and no strong prior awareness of the brand

Comparing against

Rick Steves audio guides, Google Maps 'About this place', Wikipedia lookups, or simply ignoring the history entirely (medium confidence)

WHO IT'S UNINTENTIONALLY REPELLING

The history-enthusiast traveller who wants academic depth or offline reliability — the AI-generated framing may signal 'hallucinated facts' to a more sceptical visitor who values accuracy over narrative flair

BIGGEST UNANSWERED QUESTION

“Is the content accurate and trustworthy, or is the AI just making things up?”

Trust

Hide fix ▲

The page never addresses the most predictable objection for an AI travel app: 'Is this content accurate or will it make things up?' The word 'AI' appears prominently but no claim about sourcing, editorial review, or factual grounding is made anywhere on the page. Sceptical visitors — particularly history enthusiasts — will bounce on this concern alone.

"Your pocket AI storyteller"

RECOMMENDED FIX

Add a single trust line near the hero or beneath the feature description — e.g. a brief note on how content is sourced or verified. Even 'Stories grounded in historical records, local archives, and verified sources' would meaningfully reduce this friction.

EXAMPLE REWRITE

Before

Your pocket AI storyteller. Wherever you go, it tells you the origins, legends, and history of the place around you.

After

Your pocket AI storyteller — stories grounded in historical records and local sources. Wherever you go, it tells you the origins, legends, and history of the place around you.

Conversion

Hide fix ▲

Neither the App Store nor Google Play CTA is accompanied by any microcopy explaining what the visitor gets after downloading — no mention of whether it's free, whether an account is required, or what the first experience looks like. A visitor who is on the fence has no reassurance that the commitment is low.

“Download on the App Store GET IT ON Google Play”

RECOMMENDED FIX

Add a single line beneath both download buttons — e.g. 'Free to download · No account required to start' — to remove the last hesitation before the tap.

EXAMPLE REWRITE

Before

Download on the App Store GET IT ON Google Play

After

Download on the App Store GET IT ON Google Play Free to download · No sign-up needed to explore your first story

Code

Medium effort

Trust

Hide fix ▲

The page has no testimonials, App Store star rating, press mentions, or user quotes. The only social signal is '50,000 explorers' — a count without any qualitative validation. For an app asking visitors to trust AI-generated historical content, third-party endorsement is essential.

“Join fifty thousand explorers uncovering the hidden chapters”

RECOMMENDED FIX

Add a strip of 3 App Store or Google Play review excerpts with star ratings and reviewer names beneath the hero, or pull a press quote if coverage exists. Even a displayed App Store rating badge would meaningfully lift credibility.

Messaging

Hide fix ▲

Travellers frequently visit areas with poor connectivity — a location-aware AI storytelling app raises an immediate practical question: does it work without data? The page never addresses this, leaving a predictable objection unanswered.

RECOMMENDED FIX

Add a brief capability note in the feature section or FAQ — e.g. 'Works with mobile data or Wi-Fi; offline mode available for pre-downloaded stories' (adjust to reflect actual capability).

⚡ Quick win

Trust

Hide fix ▲

The page never states whether the app is free, freemium, or paid. 'Join fifty thousand explorers' implies accessibility but does not confirm it. A visitor who suspects a hidden paywall may not bother downloading.

RECOMMENDED FIX

Add 'Free to download' or 'Free stories every day — premium unlocks more' (whichever reflects the actual model) near the primary CTA or in the hero subheadline.

Trust

Hide fix ▲

'Join fifty thousand explorers' is a useful number but stands alone without any qualitative signal — no rating, no quote, no outcome. It tells visitors the app is used but not whether it's loved or effective.

“Join fifty thousand explorers uncovering the hidden chapters”

RECOMMENDED FIX

Pair the user count with an App Store rating: e.g. 'Loved by 50,000 explorers · 4.8★ on the App Store' — or add a short attributed quote from a real user beneath it.

EXAMPLE REWRITE

Before

Join fifty thousand explorers uncovering the hidden chapters of places around the world.

After

Loved by 50,000 explorers worldwide · [4.X★ on the App Store — insert your actual rating]

Fixing this puts you ahead of about half your competitors.

SCORECARD

6/10 checks passed · 2 borderline

✓ 5-Second Test

~ Single Primary CTA

Two parallel download CTAs (App Store and Google Play) appear side by side — these represent the same action on different platforms and are not competing, but the nav also contains a 'Download App' button, creating mild redundancy rather than a single dominant focal point; the hero CTA is clear enough but the duplication dilutes visual hierarchy.

~ Specific Claims

'Join fifty thousand explorers' is the only quantified claim on the page — it provides a user count but the core value proposition ('long-form history', 'narrative with arc') remains qualitative throughout; no claim about content depth, accuracy, or coverage is anchored with a number.

✓ Social Proof

✗ Objection Coverage

✓ Outcome Framing
